# Agel FLX Gel Supplements

*Changeover after his win in Cambridge*

Originally a joint supplement for humans, Agel Gel Supplements were designed to maintain healthy joints and to assist with the repair of damage or injury.

Ian Small, a standard bred trainer from South Auckland, has discovered a new use for the product. His winning racehorse 'He's just a machine' developed an inflammation of the hock that was affecting his performance; the horse was having anti-inflammatories injected into his joint to try and bring down the inflammation and reduce the pain. Ian was contacted by a friend who used FLX himself to try on 'He's just a machine'. Ian checked with his vet, HRNZ Race Course detective and Dr Beresford to ensure the ingredients within FLX were both legal and safe for horses, which they were.

Ian began to treat his horse by giving three sachets for three days and by day three had noticed a huge difference in his horse. The swelling had reduced and the mobility of his horse was greatly improved. After the initial loading dose of three days the treatment continued giving three sachets three times a week. The horse's form returned one-hundred percent and he went on to win.

Ian has shared this result with many of his friends within the industry and many of his Thoroughbred friends who have all put their horses onto the product with fantastic results. Ian said, "Since January 2008, we have seen 100 horses win races that have been on FLX". Ian and his brother Geoff now have most of their horses on a regime of FLX and are more than pleased with the results. Changeover, who recently impressed everyone at The Jewels in Cambridge, is one of these horses.

The regime used by Ian is three sachets fed to his horse in a dose syringe on the Monday, Wednesday and Thursday before the Friday race meet.

So what is it that makes Agel FLX work so well for horses and humans?

FLX was formulated using four ingredients that are well known to being beneficial to the maintenance of healthy joints: Chondroitin, Glucosamine, MSM and Celadrin.

What are the benefits of each ingredient?

1. Glucosamine as a major structural component of Chondroitin and stimulates its production.
2. Chondroitin as a major building block of cartilage; helps keep it soft and flexible and protects it from enzymatic destruction.
3. MSM strengthens collagen bonds, creating stronger and healthier cartilage.
4. MSM relieves minor and temporary pain.
5. Celadrin increases cell membrane.
6. Celadrin helps provide adequate joint lubrication.

Agel FLX was formulated to take advantage of these four ingredients that have been found to be very beneficial in the maintenance of healthy joints and maximum flexibility. This formulation is a first, not only because it contains all four ingredients, but also because it is delivered in a gel suspension which enhances absorption of the ingredients.

There are three important factors that make supplements effective:

- the proper timing of ingestion,
- the correct quantity of each nutritional component,
- and the bioavailability of the nutrients.

The convenience of the portable gel packs helps with proper timing for taking the supplements with meals, which enhances the bioavailability (absorption and utilisation) of each nutrient; they are readily absorbed into your body which is why this supplement works so well for horses.
